

Profile	Doctoral researcher in Human-Technology Interaction at TAUCHI, Tampere University. I study inclusive, multimodal interaction (gaze, gesture, and physiological sensing) and build and evaluate AI-driven, human-centred systems, combining HCI research, experimental user studies, and interaction design.	
Education	Sep 2024 - Present	PhD in Human Technology Interaction Tampere University
	Aug 2020 - May 2023	MS in Human Technology Interaction Tampere University Full scholarship recipient GPA 4.42
	Aug 2016 - Jun 2020	BBA in Business Information Technology Oulu University of Applied Sciences School Ambassador
Research Output	Kiskola, J., Qin, M., Andersson, E., Kuusisto, H., Syvänen, A., Olsson, T., Ilves, M., Kamppari, V., Isokoski, P., Bente, G., & Surakka, V. Labeling Negative Comments on Online News May Enhance Reader Experience: A Group-Based Experiment. NordiCHI 2026 (accepted). Anuragi, D., Qin, M., Surakka, V., & Raisamo, R. Real-Time Multimodal Arousal Detection and its Haptic Regulation. NordiCHI 2026 (accepted, demo). Qin, M., & Anuragi, D. (2025). A Social Compass: Guiding Self-Regulation in High-Arousal Moments with Ubiquitous Sensing. UbiComp Companion '25. Remizova, V., ... Qin, M., ... (2025). Foggy Fun: Mid-air Gestural Interaction with a Fogscreen by Children with Attention Deficits. Behaviour & Information Technology. [Cited 1] Remizova, V., ... Qin, M., ... (2023). Exploring Mid-air Gestural Interfaces for Children with ADHD. MIG '23. [Cited 4] Qin, M. (2023). Gaze in Remote Collaboration. MSc Thesis, Tampere University. [Cited 1] Qin, M. (2020). The Impact of Influencers on Young People's Buying Decisions. BBA Thesis, Oulu UAS. [Cited 15]	
Awards & Funding	UbiComp/ISWC 2025 Academy Project, RCF (2026 call)	People's Choice Student Challenge Award Principal author of the group research proposal; rated excellent (5/6) by the review panel.
Research Experience	Tampere University Researcher May 2024 - Aug 2024 Tampere University Research Assistant Feb 2023 - Dec 2023	Investigated methods to reduce cognitive load for heavy-machinery operators; conducted the literature review and data analysis; built the project website. Contributed to research on accessible mid-air gestural interfaces for children, including children with ADHD: performed data analysis using a range of research methods and analytical tools, and facilitated collaboration between researchers and technical teams, translating research findings into actionable insights.
Skills	Research	Experimental design, user studies, eye tracking, cognitive load analysis, heuristic evaluation, statistical analysis (SPSS, R), stakeholder interviews
	Design	UX/UI, wireframes, prototyping, information architecture, journey mapping, Figma
	Programming & AI	Python, R, HTML/CSS, React, machine learning, multimodal AI / foundation models (e.g., ImageBind), wearable & physiological sensing data
	Languages	English (fluent), Finnish (basic), Mandarin Chinese (native)
